 Clear or Dark Bronze

- Options**
- Ceiling lights.
 - Extended, cropped or segmented canopy.
 - Prep up to 1" glazing.
 - Aluminum roof.
 - Custom anodized or paint finish.
 - Active & Inactive mats

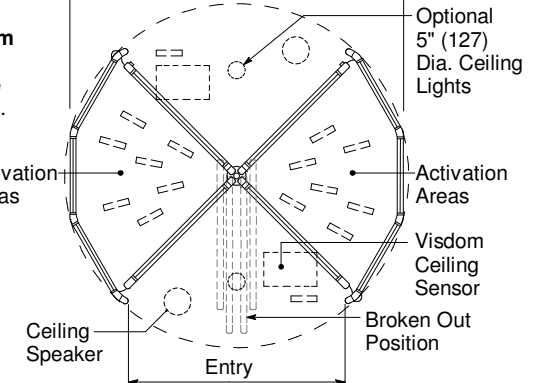

Installation

- Door unit is surface mounted to finish floor (floor not to exceed 1/4" out of level). Unit is free-standing with no additional support required.
- Drum can be center connected to adjacent construction or throat connected (at entry vertical rails. See p.F1.2). Allow 1/4" shim space each side & at canopy. Adjacent construction not to bear down on door unit.
- Electrical: Provide 120 VAC, 15 amp service on a dedicated 20 amp circuit breaker routed to power operator mounted within the enclosure canopy.

Operation

- Traffic is controlled from both directions. An Access Control System device (by others) is required at each entrance to obtain passage authorization. **Authorization will allow door rotation and access based on mode of operation selected. Visdom ELITE® system will detect piggybacking and tailgating violations.** Unauthorized passage will cause door to stop and announce security violation. Door rotates back to clear secure area then resumes normal rotation. Fail-safe design provides full operation for 2 hours in the event of power failure.

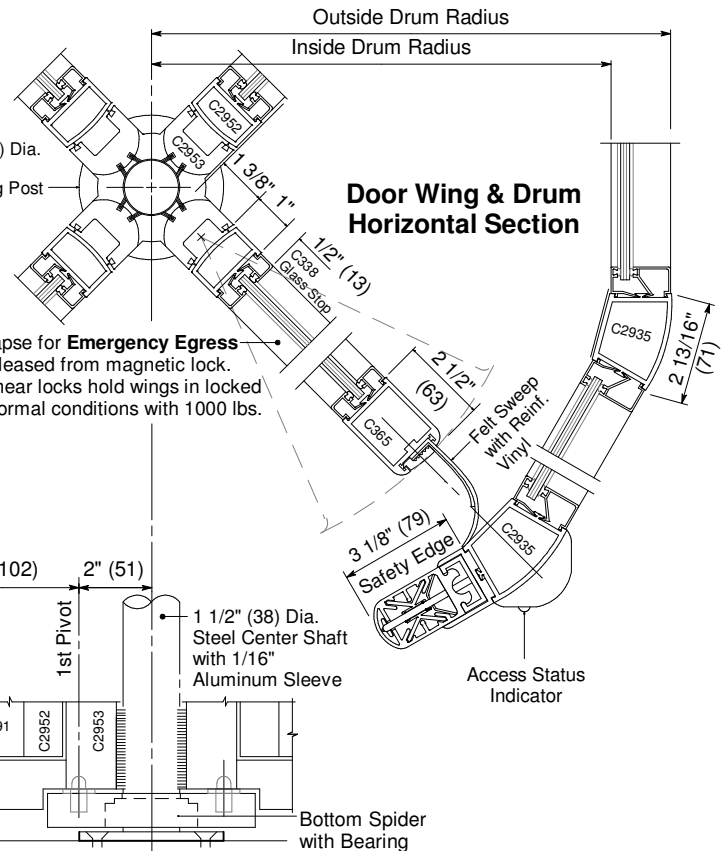

Note:
 Mode of operation can be in either 'x' position (shown) or '+' position.

Floor Plan & Exterior Elevation

Drum Door Wing Vertical Sections

Door Wing & Drum Horizontal Section

Door wings collapse for **Emergency Egress** after power is released from magnetic lock. Electromagnetshear locks hold wings in locked position under normal conditions with 1000 lbs. of force.
