

Horton Series 9900 Manual EasyFlow Power-Assist Revolving Door

With Automatic Home Positioning

Manually operated Horton Automatics Revolving Doors are now available with power-assist automatic home positioning

Horton Series 9900 Revolving Doors maintain the optimal wing position with a wide range of optional architectural details.

The new Series 9900 Manual EasyFlow Revolving Door includes a power-assist feature, return to quarter-point, to optimize the air lock sealing of your revolving door. Most manual revolving doors come to rest wherever friction demands, and the laws of physics take over. Manual revolving doors often stop randomly with wings in a less effective position. This is suboptimal for inviting the next pedestrian, temperature control of the building, sound insulation and resistance to air infiltration. The very reasons for revolving doors that are always open - always closed, are diminished if the wing tips are not in the most favorable position. The Horton Series 9900 Manual EasyFlow Power-Assist Revolving Door ensures maximum benefits offered by a revolving door entrance.

Specify Horton and demand AAADM certified installation

AAADM American Association of Automatic Door Manufacturers

Features:

- Most inviting door position to approaching pedestrians
