

Standard Packages with Floor Mounted Bottom Guides

Type 010

The sliding panel (X) slides to the interior of the fixed sidelite (O).

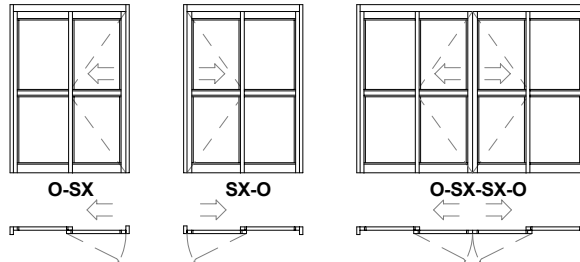

Note

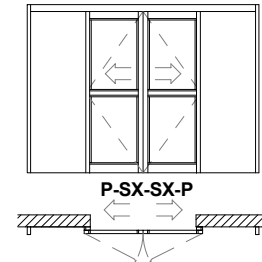

Packages shown represent configurations most frequently used. Consult factory for other available door types.

Type 110

The slide-swing panel (SX) slides to the exterior of the fixed sidelite (O) enabling it to swing out from any position of travel.

Surface Applied

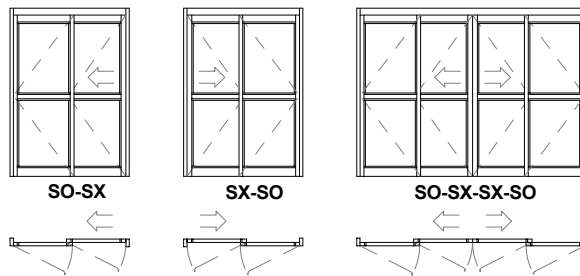

Type 310

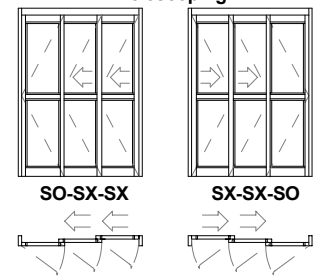

The slide-swing panel (SX) slides to the interior of the swing-out sidelite (SO).

The swing-out sidelite enables slide panel to swing out from any position of travel.

This combination creates a large opening to move wide objects.

Telescoping

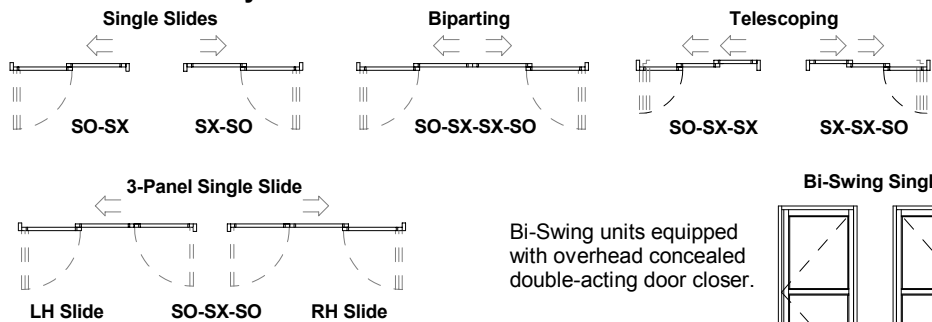

Standard Packages with Trackless Bottom Guide System

Type 310 Trackless

The slide-swing panel (SX) slides to the interior of the swing-out sidelite (SO) and will swing out after sliding to full open position and SO flush bolt is released.

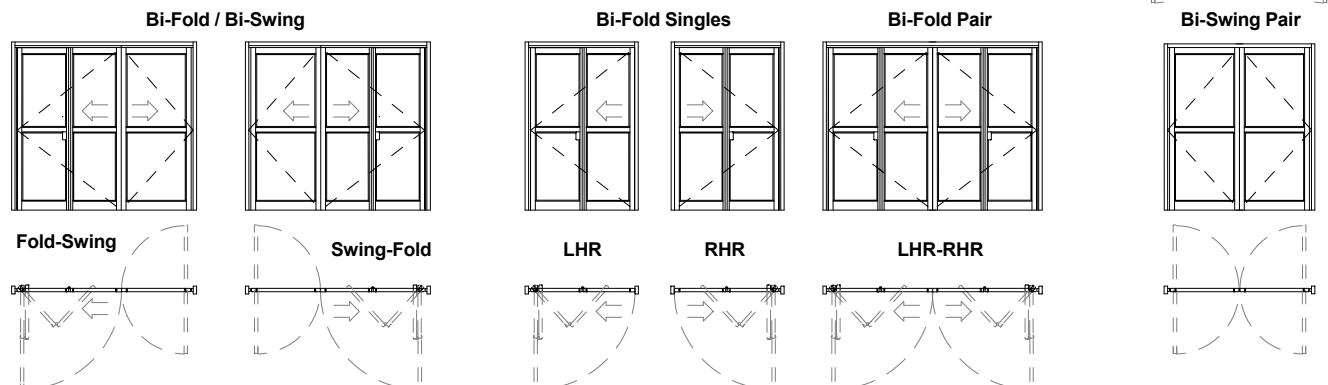

The absence of floor mounted bottom guides and combination of both sliding panel and sidelite swinging out creates a large obstacle-free opening to move wide objects.

Fold / Swing Packages

Bifolding panels combined with swing panel allows for extra wide opening.

Fold-out panels shown. Fold-in panels available. Both types swing out to create wide opening.
